Security management Information Security Intranet Solution

An information security intranet affords an invaluable education and reference tool for all employees within an organisation

One of the most important aspects of BS 7799 compliance concerns the availability, and management, of security-related information such as policies, procedures and records.

Providing easy access to such materials not only simplifies the task of security management but has been proven to increase its effectiveness within an organisation too. Furthermore, having a clear view of the status of documentation will be invaluable to any external reviewer.

It's also important that security policies and procedures are communicated to other members of staff. Although required infrequently during the course of most employee's tasks, when a security incident or question does arise, the benefits of easily accessible – and up to date information – will be quickly realised.

Insight has recognised this requirement and has developed a pro-forma Intranet solution that provides a single repository and reference for all security related material. As well as making the information easily accessible to security management and external reviewers, it also affords an invaluable education and reference tool for other members of staff.

Introduction

A key component in developing – and maintaining – an effective Information Security Management System (ISMS), is ensuring that all information on security policies, standards and related processes is easily accessible by the employees of an organisation.

Insight provides a cost effective solution in the form of a packaged Information Security Intranet Solution (ISIS) that provides organisations with:

- Online reference to all security related information and materials
- Pro-forma security policies and standards
- Procedures for organisational assets, access control, business continuity and physical, personnel and equipment security
- Security organisation chart and associated job descriptions and responsibilities
- Guidelines on compliance issues such as legislation and internal security audits.

Support for BS 7799

The ISIS product encompasses all ten sections of the 2002 version of BS 7799 for the purpose of demonstrating compliance to the standard as well as presenting the information in a logical fashion for access by staff.

A significant amount of additional practical advice and guidance on the interpretation and implementation of the BS 7799 standard is also included.

Customising the site

Because the implementation and management of security will inevitably differ from organisation to organisation, ISIS has been designed so that client-specific content can be incorporated to supplement the standard information supplied.

The product has also been developed using a series of templates and can, therefore, be easily customised to adhere to an organisation's corporate house style for existing web or Intranet systems.

www.insight.co.uk

Key features

- Online reference to all security related information and materials
- Pro-forma security policies and standards
- Procedures for company assets, access control, business continuity and physical, personnel and equipment security
- Security organisation chart and job descriptions and responsibilities
- Guidelines on compliance issues such as legislation and internal security audits.

The ISIS product supports all aspects of an ISMS including:

Policy and organisation

- Information security policy
- Internet and e-mail policies
- GSI guidelines (Government only)
- Security organisation chart including job descriptions and responsibilities
- Compliance – including legislation list and internal security audits.

Procedures

- Organisational assets
- Personnel, physical and equipment security
- Security incidents
- Systems access control
- Business continuity planning.

BS 7799

- A copy of the standard including all ten sections from security policy to compliance.

Security news

- Informative and up to date articles on topics such as virus threats, hacking and legislation.

Feedback form

- An interactive feedback form enabling employees to submit details and opinions.

Help and search facilities

- ISIS includes an online search facility as well as help and frequently asked question pages to help staff quickly locate information or advice on specific information security issues.

About Insight

Insight Consulting is the leading independent provider of services and solutions for information security, business continuity and risk management.

We offer a complete, end-to-end portfolio encompassing:

- Research
- Consultancy
- Testing
- Implementation
- Training
- Recruitment
- Managed services

Insight is BS 7799 certified, is a GCat and S-Cat (Category 7) supplier and subscribes to the CESG Listed Advisor Scheme (GLAS) and CHECK services.

If you'd like to discuss how Insight could help you manage risk in your organisation, email us at insight@insight.co.uk or visit our web site at www.insight.co.uk
